SUMMARY

Full-stack software developer with a B.S. in Computer Science from the University of Maryland. Builds and operates web products across frontend, APIs, data pipelines, databases, and deployment, with recent work in realtime voice, public-data tools, and developer education. Open to software engineering roles.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL

Frontend: Next.js, React, Tailwind CSS, Docusaurus, Astro

Backend & Data: FastAPI, PostgreSQL, Redis, REST APIs, d3-geo

Infrastructure: Docker, Git, Linux, Vercel, Render, Neon, Upstash

INDEPENDENT SOFTWARE DEVELOPMENT · 2024 - Present

SoloMock - Realtime Voice Mock Interviewer | Next.js, TypeScript, OpenAI Realtime API, WebRTC, Monaco, Tailwind CSS, Vercel

solomock.com · 2025

- Built a browser-based mock-interview workspace that combines live voice, a Monaco code editor, and structured coding problems; streamed debounced code snapshots over a WebRTC data channel so feedback stays in sync with the candidate's work.
- Created 15 interviewer guides with solution paths, staged hints, follow-up questions, and edge cases to keep sessions consistent across problems.
- Protected sessions with server-minted ephemeral keys, sliding-window rate limits, a 15-minute session cap, and a manual extended-access workflow.

Gasolytics - US Gas Price Map | Next.js 16, React 19, TypeScript, d3-geo, Vercel Blob, Vercel

gasolytics.com · 2026

- Built an interactive US gas-price map with a d3-geo choropleth projected to SVG server-side (so no d3 ships to the client), metro price pins, wheel-zoom/drag-pan, and per-state detail panels.
- Expanded it into a national fuel-economics toolkit with 51 state and metro pages, a trip-cost calculator, an EV-vs-gas suite, and gas-tax, border-gap, and affordability analyses fed by daily AAA snapshots.

all-in-one-URL - Short URLs, QR Codes & Barcodes | Python, FastAPI, PostgreSQL, Redis, Docker, React, TypeScript, Tailwind CSS

all-in-one-url.vercel.app · 2024

- Built a FastAPI backend for short URLs, QR codes, and barcodes with per-resource click/scan analytics, Redis-backed caching and counter batching, and tiered SlowAPI rate limiting.
- Implemented JWT auth with bcrypt hashing and per-resource ownership (preserving anonymous resources); containerized the two-tier app with Docker Compose and deployed across Vercel, Render, Neon (Postgres), and Upstash (Redis).

Throughline - Technical Learning Platform | Docusaurus, Astro, React, TypeScript, MDX

throughline.guide · 2026

- Built an Astro and Docusaurus learning platform that connects six technical guides through a five-stage path from fundamentals to hands-on projects and interview practice.
- Created a shared React and TypeScript design system with navigation, quizzes, code exercises, and consistent content patterns across the guide sites.

EDUCATION

University of Maryland, College Park — College Park, MD

Bachelor of Science, Computer Science · December 2022

Relevant coursework: Data Structures, Artificial Intelligence, Data Science, Computer Systems, Web Development.
