SUMMARY

Software developer with a B.S. in Computer Science from the University of Maryland. Since 2024 I have designed, built, and run my own web products, most recently a job-fit analysis tool, two realtime voice apps on the OpenAI Realtime API, and a bilingual client site with an AI booking agent. US citizen based near Seattle, open to relocation. Seeking a first full-time software engineering role.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL

AI: OpenAI Realtime API, Claude API, LLM-as-judge evaluation, prompt design, cost controls

Frontend: Next.js, React, Tailwind CSS, d3-geo, Docusaurus, Astro

Backend & Data: FastAPI, PostgreSQL (Neon), Redis, REST APIs, WebRTC

Infrastructure: Vercel, GitHub Actions, Docker, Git, Linux, Playwright

INDEPENDENT SOFTWARE DEVELOPMENT · 2024 - Present

How's My Job Fit? - Evidence-Based Job-Fit Reports | Next.js, React, TypeScript, pdf.js, Tesseract.js, Vercel
howsmymyjobfit.com · 2026

- Built a candidate-side job-fit workbench that parses resumes in the browser (PDF, DOCX, OCR) and scores them against a posting with a deterministic weighted model that keeps eligibility separate from skills.
- Shipped six fictional example reports and a public methodology page; launched on Vercel in August 2026.

SoloMock - Realtime Voice Mock Interviewer | Next.js, TypeScript, OpenAI Realtime API, WebRTC, Monaco, Tailwind CSS, Vercel

solomock.com · 2025

- Built a browser-based mock-interview workspace that combines live voice, a Monaco code editor, and 15 structured problems; streamed debounced code snapshots over a WebRTC data channel so feedback stays in sync with the candidate's work.
- Protected sessions with server-minted ephemeral keys, sliding-window rate limits, a 15-minute session cap, and a manual extended-access workflow.

Gasolytics - US Gas Price Map | Next.js 16, React 19, TypeScript, d3-geo, Vercel Blob, Vercel

gasolytics.com · 2026

- Built an interactive US gas-price map with a d3-geo choropleth projected to SVG server-side (so no d3 ships to the client), metro price pins, wheel-zoom/drag-pan, and per-state detail panels.
- Expanded it into a national fuel-economics toolkit with 51 state pages plus metro pages, a trip-cost calculator, an EV-vs-gas suite, and gas-tax, border-gap, and affordability analyses fed by daily AAA snapshots.

Amex Roofing - Client Site with AI Booking Agent | HTML, Tailwind CSS, Vercel Serverless, Google Calendar API, Google Solar API

amex-roofing.com · 2026

- Delivered a bilingual (English/Chinese) production site for a roofing contractor with 26 local-SEO city pages and instant estimates from Google Solar API roof measurements.
- Built an after-hours AI chat agent and a booking flow that writes appointments straight to the crew's Google Calendar through Vercel serverless routes.

Throughline - Technical Learning Platform | Astro, Docusaurus, React, TypeScript, MDX

throughline.guide · 2026

- Built an Astro and Docusaurus learning platform that connects six technical guides through a five-stage path, on a shared React and TypeScript design system with navigation, quizzes, and code exercises.

all-in-one-URL - Short URLs, QR Codes & Barcodes | Python, FastAPI, PostgreSQL, Redis, Docker, React, TypeScript

all-in-one-url.vercel.app · 2024

- Built a FastAPI backend for short URLs, QR codes, and barcodes with per-resource analytics, Redis-backed caching, tiered rate limiting, and JWT auth; containerized with Docker Compose and deployed across Vercel, Render, Neon, and Upstash.

EDUCATION

University of Maryland, College Park — College Park, MD

Bachelor of Science, Computer Science · December 2022

Relevant coursework: Data Structures, Artificial Intelligence, Data Science, Computer Systems, Web Development.
